Ridge–DWI
Ridge–fMRI
Ridge–fusion (early)
GINE–DWI (2×32)
GINE–fMRI (2×32)
GINE–fusion (2×32)
Before harmonization · No ComBat
A. MAE (years)
B. RMSE (years)
C. R²
D. Pearson r
After harmonization · Training-age mean-only ComBat
E. MAE (years)
F. RMSE (years)
G. R²
H. Pearson r
ADNI n=125
ADRC n=106
HABS n=6
Same participant folds and CN observations · 237 scans / 189 participants · Matched cohorts; n = scans · 95% participant-bootstrap intervals
Both arms use training-only QC/scaling and separate nested model fitting; harmonization is fitted on training folds only.
